Hazy... Hot... Humid...

Kollsman's EVS will get you there safely - season after season...

EVS FAA CERTIFIED

Cut through the summer haze with the clear vision of Kollsman's Enhanced Vision System. Since pioneering the world's only FAA certification of an Enhanced Vision System (EVS) in 2001, Kollsman's "All Weather Window ®" EVS is changing the way business and commercial aircraft pilots fly. Currently, the "All Weather Window ®" EVS is certified for installation on Gulfstream G-V®, GIV-SP®, G400™, G500™, and G550™ aircraft. The "All Weather Window ®" EVS is also planned for certifications on other aircraft models, including the Gulfstream G300™ and G450™ business jets. In addition, the Kollsman EVS will be certified on Boeing MD10, MD11 and Airbus A300, A310 air transport aircraft starting in 2006. Kollsman's EVS allows pilots to see through darkness and low visibility conditions permitting pilots to detect and see terrain and runway environment during approach sooner, thus enabling safer approaches, improving situational awareness, and aiding with the prevention of runway incursions.
